

to the other, ensuring that the two pages of any given document together fit the application's page-size and/or other constraints.

Apple PDF is a standard format for documents because it facilitates as it represents the graphics consistently associated with documents for sharing.

- 1. Documents generated via Apple PDF files are generated in the low-fidelity format. Results: Documents of other file formats sometimes don't open after because they don't have the application's native format documents.
- 2. PDF files always print correctly on any printing device.
- 3. PDF files always display correctly on screen, regardless of font, software, and operating systems. Thus, documents are not lost during platform, software, and version incompatibilities.
- 4. The low-fidelity Results is easy to download and can be freely distributed by anyone.
- 5. Compact PDF files are smaller than their native files and download in pages or entire documents directly in the Web.
